

Katrina L. Kelner received her undergraduate degree in Biology at Reed College in Portland, Oregon and her Ph.D. in Cell Biology/Neuroscience in the Cell Biology Department at Baylor College of Medicine in Houston, Texas, where, on an NSF Graduate Fellowship, she worked on estrogen action in the brain. She then did a year-long postdoctoral fellowship at the Marine Biomedical Institute at the University of Texas Medical Branch in Galveston, Texas, followed by three years at the National Institutes of Health as a PRAT fellow. Her research at the NIH was on glucocorticoid regulation of catecholamine synthesis in the laboratory of Dr. Harvey Pollard. Dr. Kelner moved to *Science* magazine in 1985 and was Associate Editor for Neurosciences until 1990, handling the peer review process for submitted manuscripts. She then served as Senior Editor for Biological Perspectives for which she solicited and edited commentaries on published research papers. As Deputy Managing Editor for *Science's* Compass (now Commentary) and Deputy Managing Editor for Biology from 1999 to 2006, she managed the Book Review, Letters, Policy Forum, and Perspectives sections of *Science* as well as overseeing the peer review process for the biological sciences. She now serves as Deputy Editor for Life Sciences.
