

Peggy L. Fischer, Ph.D.

Peggy Fischer is the Associate Inspector General for Investigations in the Office of Inspector General at the National Science Foundation. She is responsible for the management and resolution of all allegations of wrongdoing, including research misconduct, involving NSF activities. In that position, she works closely with NSF grantees and other government agencies to resolve allegations. She also directs the Office's Outreach Program which is designed to develop and improve the Office's partnerships with institutions, NSF, and members of the scientific community. In previous positions in the Office of Inspector General she worked to resolve allegations of research misconduct and planned and conducted inspections at grantee institutions and programmatic reviews within NSF.

Prior to coming to NSF, Dr. Fischer served as a senior program officer for the National Research Council's Board on Biology. She principally worked on the Funding of Young Investigators project (resulting in an NRC publication), as well as on biodiversity and conservation issues. Before coming to the NRC, she was the Director of Research and Development (national and international operations) for Flow Laboratories, a biotechnology company. She was responsible for the development of new products ranging from computerized instrumentation to cell culture products, quality control and assurance procedure development, and bioreactor product line marketing.

Dr. Fischer did her postdoctoral research at the National Cancer Institute and the University of Connecticut Health Center. Her research focused on understanding the structure and expression of particular structural and hormone-responsive genes. She received her Ph.D. in cell biology with a molecular emphasis at the University of Connecticut, and her BS in Zoology from North Carolina State University.
